

Improving GEND_GBV Data Quality to Enhance PEPFAR Program Performance

WHY?

Gender-Based Violence (GBV) is a Key Driver of the HIV Epidemic

Preventing and responding to GBV is essential to meeting PEPFAR's 95-95-95 goals. High-quality GBV data are vital to decision making to improve GBV and HIV programs.

HOW?

Use the GEND_GBV Rapid Data Quality Review Tool

The GEND_GBV Rapid Data Quality Review Tool identifies gaps and areas for improvement in reporting GEND_GBV. Find the tool here: <https://bit.ly/2L2P5p5>

Provide the Minimum Package: Don't report GEND_GBV if all services are not in place

A client does not need to receive all services in the minimum package to be counted, but the services must be available. For more information on the minimum package, visit <https://bit.ly/30N39Yo>.

Have a Plan in Case of Stockouts: Don't report GEND_GBV during stockouts

Create a mechanism to ensure GEND_GBV is not reported if commodities are stocked out, even if the client is referred elsewhere for the service. For more information, visit <https://bit.ly/2ZqVbr6>.

Document Additional Services: Consider developing custom indicators to capture work outside GEND_GBV

Custom indicators can be reported in DATIM through narratives. Discuss ideas with your USAID mission gender advisor or the headquarters gender team.
